

Dialog Cloud Backup as a Service

Dialog Cloud Backup as a Service (BaaS) is a data protection solution that leverages Dialog Cloud for tapeless backup for customer workloads.

We provide you with the assurance that your data is protected and can be resorted quickly and efficiently.

Enterprise Challenges

High Capex

Time Consuming

Need of skilled IT staff

Keep up with Growing Capacity and Business

Technology refresh with the changes in the domain

Why Dialog Cloud BaaS?

Simple

- No CAPEX investment. Pay-as-you-go model
- Less time consuming implementation by cutting down hardware implementation timelines
- Backup infrastructure is managed by Dialog staff

Secure

- End-to-End encryption
- Backup via Secure link
- Backup data resides within Sri Lankan boundaries ensuring data sovereignty

Reliable

- Hosted at Tier III Data center guaranteeing high availability.
- 24/7 support availability
- Highly experienced Dialog team backed by world leading backup partner support

Features

Image level VM backup

BaaS allows to create image level backups for virtual machines.

Partition level backup

BaaS agent allows to backup logical drives or partitions.

File level backup

BaaS agent allows to backup at file level or folder level.

WAN acceleration

WAN Acceleration reduces the bandwidth required for transferring backup data over the WAN.

Application-aware* backups

Create application-consistent, backups with advanced, application-aware processing.

End-to-End encryption

Giving the ability to encrypt backup files and data at source (during backup), in flight and at rest.

BaaS Deployment Model

Backup for VMS hosted in Dialog Cloud as well as on - premise customer workloads.
