

The Dialog Cloud extends the capabilities of a Software Defined Data Center with a self-service portal and hybrid cloud capabilities that enables enterprises to manage their cloud services easily and efficiently, with best-in-class operations, management and controls.

The Dialog Cloud is a complete Greenfield deployment built with high performance infrastructure and hosted at Sri Lankas first Tier III certified data center ensuring a guaranteed uptime of 99.982% availability and a cloud availability of 99.95%. With Dialog Cloud, Sri Lankan enterprises of varying magnitudes can experience a unique cloud experience to fulfill their cloud needs.

It is a Software Defined Data Center (SDDC) - Where compute, networking, storage and elements of security are virtualized and delivered as a service making data center services as easy and inexpensive to configure and manage as virtual machines.

Self-service portal - Extends self-service functionality to enterprises to provision and consume resources. Thus, authorized administrators, developers or business users can select services that comply with pre-defined business policies.

Hybrid cloud features - Gives the ability to manage workloads on premise and on the Dialog cloud with scalability options as the need arises.

Multi-Tenant Resource Pooling - Easily creates virtual data centers from common infrastructure to cater to heterogeneous enterprise needs. A policy driven approach helps ensure enterprises have isolated virtual resources, independent role-based authentication, and fine-grained control.

DRaaS - Ensure business continuity with comprehensive and cost-effective disaster recovery service.

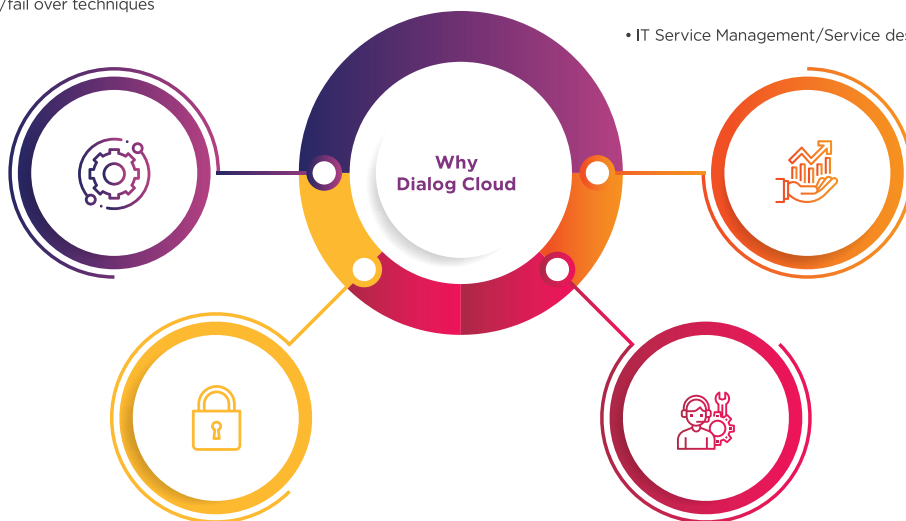

BaaS - Protects enterprises from potentially disastrous data loss.

Why Dialog Cloud?

TECHNICAL EXCELLENCE

- Fully SSD High performance cloud environment
- Multilayered dedicated perimeter NW security (IDS,IPS, Micro segmentation)
- Application consistent backup mechanism /fail over techniques

GOVERNANCE & RISK MANAGEMENT

- Meet PCI DSS, ISO 27017, CSA, CBSL Compliance Standards Fast.
- Already PCI DSS V3.2 Certified Private Cloud Environments
- ISO 27001 & ISO 9001 certified Management Systems
- IT Service Management/Service desk with ITIL Practice

SECURITY & COMPLIANCE

- 24 X 7 real time security monitoring by Tier 1 grade SIEM Solution with qualified Cyber Security professionals
- Fully hardened host environments in line with "Center for Internet Security (CIS)" & Axiata Minimum Baseline Security Standards
- Periodic third party independent audits
- Comprehensive offensive and defensive VAPT program

OPERATIONAL EXCELLENCE

- Hosted in a Uptime Tier III Certified, physical segregated, environmental controlled containment Data Center
