Dıalog ENTERPRISE

Sri Lanka's Most Trusted Data Centre Provider

Be onboard with Dialog DC solutions which enable critical colocation, connectivity and cloud readiness for your continuous growth. Contributing more meaningfully and effectively to future proof your business, Dialog DC is now readily available to partner with you and grow together, connecting your people, business locations, clouds and carriers with high performance scalable connectivity solutions.

Dialog data centre has been designed and constructed in a way it conserves energy and improves resource efficiency as never experienced before in the local context.

Dialog DC: More beyond colocation

We are passionate about pioneering data centre colocation solutions for the digital age. Our facilities established in the rationally selected locations of the country, house and connect all your mission critical infrastructure and IT services, with the power to support your high-performance computing and virtualised environments, while delivering your business 99.982% uptime guaranteed.

Of particular, our data centres are strengthened to seamlessly delivers colocation, our reliable, scalable and highly resilient data centre solution. On the other hand, our all-inclusive, pre-installed rack solutions helps to move straight in.

Our all-inclusive, pre-installed rack solutions mean you can move straight in, helping to reduce the time and overall complexity of your migration.

Tier III certified

Tier III Certification of Constructed Facility awards after an analysis against the certified design document with an on-site inspection and verification of the installed infrastructure

Sri Lanka's first ISO 27001:2013 certified iDC

This ensures that we are establishing, implementing, maintaining and continually improving an information security management system within the context of the organization.

ISO 9001 is the international standard for a quality management system ("QMS")

This shows our ability to consistently provide products and services that meet customer and regulatory requirements with our commitment for continuous improvement.
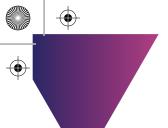

LEED GOLD certified IDC

This shows our commitment to mitigate environmental impact of a building and continously work towards a sustainable design.

Why do organisations colocate at Dialog DC?

1. Technical Excellence

a) Containment Design

b) UPS (N + N) – **Inline Tier IV**

c) Continues Cooling/ Buffer Tank – **Inline Tier IV**

d) Bus Bar Trunking / Colour Coded Power Cabling

2. Operational Excellence

a) Commitment for operational excellence- Periodically audited Operational Standarads/Practices to maintain Tier III compliance

b) Team of experts to serve our clientele (Certified Data Centre Mgmt. Professionals, Uptime Accredited Tier Designers)

c) Smart Hands - Onsite technical expertise, ready to lend a hand as and when you need

d) Customized, knowledge-based services to clients - Consultancy, Architecture, Migration, Operations, Modernization etc.

e) Simplifying data centre infrastructure management - our intelligent data centre infrastructure management platform offers real-time visibility into customer footprint, allowing to track and manage power, manage access rights.

f) High performance and security -Our high speed connectivity and highly secured data centres meet the growing demand for cloud and connectivity solutions through on-demand, scalable connectivity solutions that interconnect businesses.

g) Grow now, scale later - our data centres are built on cutting-edge technology, designed to grow in line with the needs of your business. As your business grows, so too will your data centre services as and when you need.

Unique Advantage of the Containment Design

Cold air and hot air confusion is the main energy waste in data center. In order to reduce energy waste, containments are designed to separate cold air and hot air, and configured adjustable ventilation floors for controlling environment of data hall. The unique containment design ensures very high cooling efficiency where Dialog DC customers benefits with a low power consumption/cost.

We understand that not every data centre requirement is based on a standard build. If you need a more customised data centre space our team of experts will help you design and build a solution specific to your business needs.
