

## Reliable point-to-point and point-to-multi point access worldwide.

Dialog Global Connect is ideal for organisations that have high traffic volumes between overseas sites or want full control over routing options to design their own WANs. It can also be used with existing multiple interfaces or network protocols.

Dialog Global Connect provides the most secure network available, helping your company improve application performance and prioritisation of business applications.

Dialog Global Connect is an International Private Leased Circuit (IPLC), a point-to-point dedicated leased line, or Global MPLS, a point-to-multi point mesh network between your local and global office/s, delivered over a fully-meshed auto reroutable network, for maximum uptime and data protection.

IPLC/GMPLS allows you to deliver all kinds of data (images, multimedia, data or mission – critical applications) between your geographically dispersed offices worldwide.

## Specifications

Topology	Network Layer	Technology	Bandwidth Availability	Service Level Agreements
Point-to-point	Layer 2	Multi- Protocol Label Switching (MPLS)	64 Kbps to 10 Gbps and Above	Up to 99.9% end-to-end circuit availability
Point-to-multipoint	Layer 3			

# Dialog Global Connect

## Real-time connectivity. Delivered.

### Benefits

- Dedicated bandwidth and high data security
- Fully managed end-to-end solutions
- 24x7 Network/Service Operation Centres
- Transfer video and mission-critical applications without the risk of downtime or data breaches
- Protection of user's business data
- Single point of contact for your global connectivity
- System designed for preventing disruptions
- Monitored through a network management system supervised by a team of specialists

### The Dialog Advantage
