

# Dialog Flexnet for Business

FlexNet is a fully managed SDWAN (Software Defined Wide Area Network) solution by Dialog Enterprise. The FlexNet solution will equip enterprises to address the issue of customers migrating their applications to the Cloud, and allow them to manage a complex network of private VPN's, the private cloud and the public cloud. The solution's inbuilt security function will provide the customer with enhanced protection against cyber attacks when they open their network to the public cloud.

## SDWAN Features:

Improved application performance

Improved visibility and control over application traffic

Flexibility

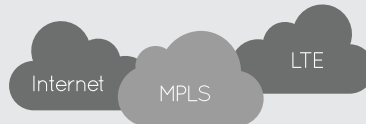

Easy to integrate with the Cloud

Secured
