

Dialog Direct Cloud Connect

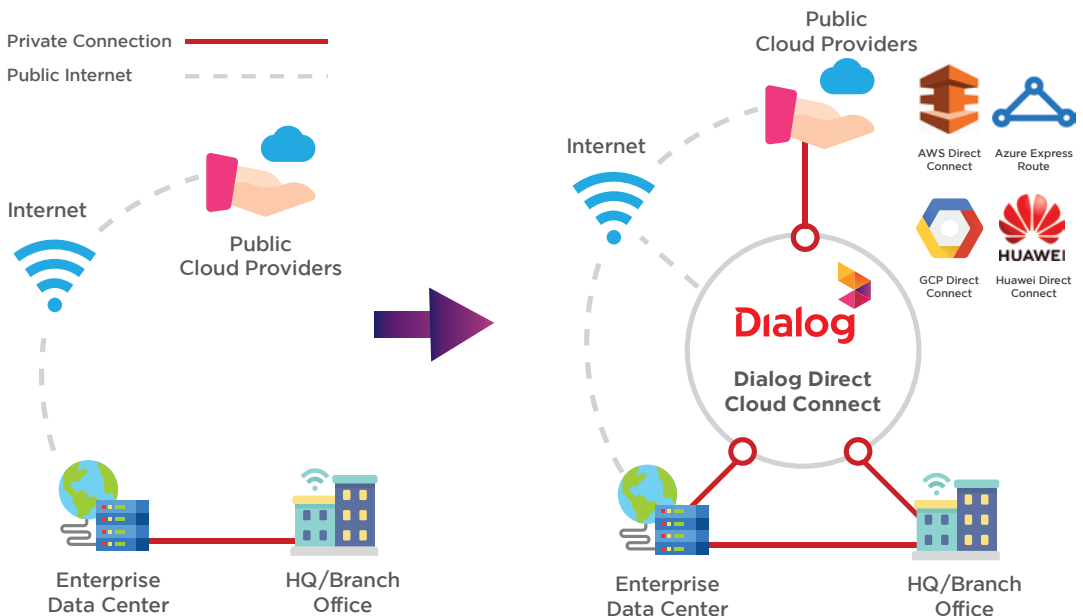

'Dialog Direct Cloud Connect' offers Sri Lankan businesses a truly local cloud experience built to global standards. Together with world class technology partners, this future-fit solution combines the strengths and expertise of Dialog's communication technology, whilst delivering unmatched broadband connectivity options to redefine the cloud journey of Sri Lankan businesses, making them more agile, cost efficient and innovative.

Dialog is Sri Lanka's first Direct Connectivity service provider to Leading Public Clouds. By joining forces with global cloud service providers, Dialog can establish a dedicated connection to your preferred cloud service provider with Direct Cloud Connect. Our direct connection services set up private links between your data center infrastructure and potentially hundreds of information and communications technology (ICT) platforms and services. The private link provides fast, secure and reliable connectivity for transmitting latency-sensitive and high-bandwidth data traffic.

Dialog Direct Cloud Connect Through Dialog Cloud

For the first time in Sri Lanka, with Dialog Direct Cloud Connect, organizations can now establish a low latency, dedicated, private, secure network connection from their premises to the world's leading public cloud data centers, rather than relying on unsecure, unmanaged non-QoS internet connections.

Benefits

- Enhanced Security**
 - Traffic over dedicated connection
 - Fewer hops to a destination
 - Keep existing security policies
 - Enhanced protection through different submarine cables
- Higher Performance**
 - Dialog SLAs with 24/7 monitoring
