Dialog Device Secure

Dialog Enterprise

Dialog Device Secure enables the corporates with the best in class mobile security for smartphones, tablets, laptops, and desktops. The solution encompasses a dedicated platform to deploy and configure policies allowing businesses to protect data in their systems and networks.

Weather it is BYOD - Bring - Your - Own - Device, COPE - Corporate - Owned - Personally - Enabled or COBO - Corporate Owned Business Only, DDS is tailor made to empower the enterprises to manage and secure mobile devices centrally with utmost convenience.

How it works

ON-BOARD USERS

Corporate administrator able to create participating users and segment these users into chunks of groups based on their role or the business context.

CONFIGURE DEVICE & POLICIES

Configure custom device settings and define policies and parameters to tolerate privileges to corporate owned data and resources.

ENROLL DEVICES

On-board handsets and devices to the platform over-the-air.

DEPLOY & MANAGE

Employ configurations and policies remotely with event-based alerts.

Security Throttle

PERSONAL DEVICES - BYOD	CORPORATE OWNED DEVICES- COPE	CORPORATE OWNED DEVICES WITH STRICT BUSINESS USE- COBO
Corporates wants to ensure their intellectual property remains intact while personally owned devices are allowed. It guarantees an acceptable balance between security and corporate resource-access across all leading mobile platforms.	Companies provide smartphones primarily for office usage with basic functions such as voice calls, messaging and personal applications allowed along with some controls on usage and flexibility.	Corporates incidentally prohibit personal use of mobile devices. It may lead up to the extent of isolating a single application running every time when the user turns the device on.
