

A fully-fledged visitor management system to optimise the efficiency of receptions or front desks at businesses thereby empowering reception staff to receive visitors that arrive at the facility through smart pre-registration.

The VisitorTags system facilitates an efficient way for companies, large or small, to manage their visitors and to provide a unique and memorable experience while protecting employees against theft and other security risks; by way of reducing the time spent during security concerns, easing visitor validation and minimising human errors. The system performs the essential tasks of recording when guests arrive, limit where they can go, and control the length of their stay. Furthermore, maintaining audit trails and helping organisations with compliance to international and national standards and regulations.

## Automated Visitor Management - VisitorTags
