

Dialog Secure Internet

Next-Generation Firewall as a Service

The attack surface in enterprise environments is constantly evolving and expanding. This is for a number of reasons; including the rapid growth and adaption of cloud applications, the shift towards remote work, mainstream adoption of bring-your-own-device (BYOD) policies and hybrid cloud environments.

Next-Generation Firewalls (NGFWs) are a critical component of a defense-in-depth strategy. Enterprises are investing in NGFW perimeter defenses that address these requirements and reduce the attack vectors that cyber-criminals can use to compromise their environments.

Dialog Secure Internet is a local private-cloud hosted, virtual based in-line network security platform, which converts the traditional internet services to secure internet services at Internet Service Provider (ISP) level by providing protection at the ISP core network level, while threats are detected, blocked and stopped before they reach your business.

For the first time in Sri Lanka, Dialog Secure Internet, the leading in-line network security technology uses their own Dialog Enterprise Cloud platform to deliver enterprise class security services, partnering with Gartner magic leader quadrant NGFW providers, while catering for the scalable, next generation cyber security demands. This future-proof solution integrates external systems to deploy a holistic security framework across multiple networks from a single point of perimeter control.

Why Dialog Secure Internet is important for your enterprise

ISP-level protection provides a crucial, added layer of in-line security at perimeter level.

We use Gartner magic quadrant leaders square listed next generation firewall product.

Tighter and deeper integration with Dialog Enterprise Cloud platform; provides on demand expandability.

Hosted at Dialog Tier III Certified Data Center in Sri Lanka.

Flexible product & service deployment options on pay-as-you-grow business model.

Ability to integrate with legacy network architectures with service provider expertise.

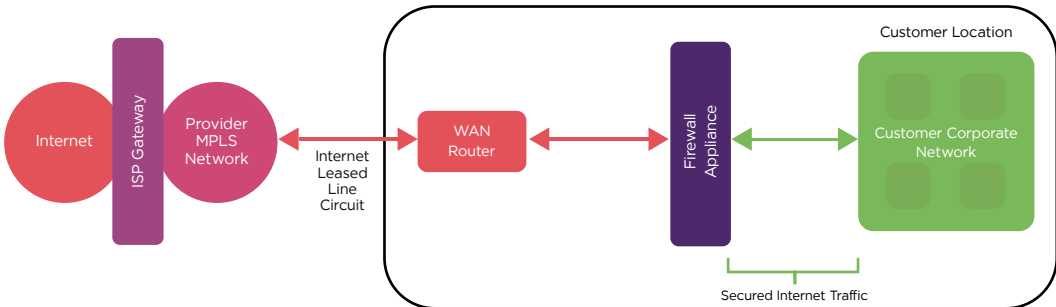

24/7 after sales support service with predefined SLA(s) based service contract agreement.

Dialog Secure Internet Features

- ✓ ISP gateway level protection
- ✓ Multi-layer protection
- ✓ Packet inspection
- ✓ Stateful inspection
- ✓ Deep packet inspection
- ✓ Intrusion detection & prevention
- ✓ Advanced malware protection (AMP)
- ✓ Antivirus
- ✓ Application control
- ✓ Web/URL filtering
- ✓ End-to-end protection for remote access
- ✓ Secure SDWAN
- ✓ Integration with other security solutions
- ✓ 24 x 7 managed service (MSSP)
- ✓ Centralized administration, management, maintenance and reporting
